

Cordys

Cordys is a global provider of software for business process innovation. Global 2000 companies worldwide have selected Cordys to achieve performance improvements in their business operations, such as increased productivity, reduced time to market and faster response to ever-changing market demands. Headquartered in the Netherlands, Cordys has offices in the Americas, EMEA and Asia-Pacific.

Cordys R&D

Cordys R&D is responsible for the development of the Business Operations Platform. At Cordys R&D, we bring together the most creative minds in software engineering, quality assurance, user interaction design and product management to develop state of the art software in a multicultural and multidisciplinary environment.

We are looking for

Java Developers

Do you have a passion for software innovation?

Do you love to solve problems?

Do you know how to write robust and reliable systems?

Do you enjoy learning new technologies, discussing innovative ideas with your peers and coming up with great product solutions?

Job Description

You will be working in a team with talented developers and product managers who have a good understanding of customer requirements. You will be involved in all technical discussions, drive new innovative ideas of designing software systems and make calls on what is feasible and what is not.

Position Summary

Working in our NL head office at Putten, you will engage with other Developers, Product Managers, Architects and QA engineers in a Scrum team. You will collaborate with Team leads and Architects to both promote great software design and drive innovation by coming up with new and surprising ideas for our products and processes. We will appreciate when you have the drive and ability to point out issues with the existing architecture and code, and clean it up.

Key Skills

- Excellent understanding of J2SE.
- Thorough understanding of Java web applications and application servers.
- Good knowledge in back-end technologies like Spring, Hibernate, Lucene, SQL and others.
- Superior problem-solving skills.
- Taking initiative and the ability to work independently and in a team.
- Knowledge of Open Source libraries, tools and frameworks, e.g. for logging, wiring, testing, and building. The more the better!
- Excitement for the latest trends in Java development.
- Experience with agile software development methodologies like XP and Scrum.
- Interest and drive to learn more about our platform, languages, frameworks.
